

IP & Regulatory AI Assistant — Patents

Demo knowledge-base document

This synthetic document is for RAG testing and demonstration. It is not an official government publication and is not legal advice. For the final SIH system, replace demo content with verified documents from relevant official authorities.

Overview

A patent is an intellectual property right associated with an invention. Patent systems generally provide a time-limited exclusive right in exchange for public disclosure, subject to applicable national law.

Common concepts

Novelty, inventive step or non-obviousness, industrial applicability or usefulness, sufficient disclosure, and statutory exclusions are common concepts considered under patent laws.

Typical process

A typical pathway may include preparing an application, filing, examination, responding to objections where applicable, and grant or refusal. Exact procedures and deadlines depend on jurisdiction.

RAG questions

What is a patent? What are common patentability concepts? What are the broad stages of a patent application?
