

01. Ayurveda Basics and Core Concepts

IP-SAKTI Sahayak — RAG Knowledge Base

Purpose

RAG-ready educational reference covering the basic concepts of Ayurveda. It is intended for information retrieval and demonstration, not diagnosis or treatment.

What is Ayurveda?

Ayurveda is a traditional system of medicine originating in India. It emphasizes health maintenance, prevention, lifestyle, diet, and therapeutic approaches within its own traditional framework.

Major conceptual areas

Common educational areas include the three doshas (Vata, Pitta and Kapha), dhatu, mala, agni, prakriti and approaches to maintaining balance. These terms should be interpreted in the context of Ayurveda rather than treated as biomedical diagnoses.

Ayurvedic medicines

Ayurvedic products may include herbal, mineral and other traditional preparations. Product quality, manufacturing, labelling and permitted claims are subject to applicable rules.

RAG use

Useful questions: What is Ayurveda? What are doshas? What is prakriti? What is agni? What is the difference between an Ayurvedic concept and a modern medical diagnosis?

Source note

This document is a project-authored summary. For regulatory claims, consult the applicable Indian government and WHO documents in the project knowledge base.

Project note: This PDF is an original RAG-oriented summary created for the prototype. For legal, regulatory or medical decisions, use the current official source documents and qualified professionals.
