

04. Ayurveda Regulatory Compliance in India

IP-SAKTI Sahayak — RAG Knowledge Base

Purpose

Core India-focused regulatory reference for the project.

Regulatory framework

Indian government sources describe Ayurvedic, Siddha and Unani drugs under the Drugs and Cosmetics framework. Relevant rules cover areas such as manufacture for sale, labelling, packing and regulatory inspection/analysis.

Manufacturing

A manufacturer must follow the requirements applicable to the category of product and manufacturing activity. Quality systems, records, testing and manufacturing controls may be relevant.

Labelling and claims

Labels and product claims must comply with applicable rules. A RAG assistant should avoid inventing approvals, licences, indications or claims not supported by a source.

Licensing

Government information describes online licensing support through e-AUSHADHI for AYUSH drug production and related activities.

Clinical establishments

Government clinical-establishment resources also publish minimum standards for AYUSH facilities, including Ayurveda and other AYUSH systems.

RAG use

Useful questions: What regulations apply to Ayurvedic drugs? What areas do the rules cover? Where can an AYUSH manufacturer manage licensing? What should an AI assistant do when a regulatory source is missing?

Caution

Regulations can change. For production or compliance decisions, the system should display the source and advise users to verify the current official rule.

Project note: This PDF is an original RAG-oriented summary created for the prototype. For legal, regulatory or medical decisions, use the current official source documents and qualified professionals.
