

06. TKDL and Defensive Protection of Ayurvedic Knowledge

IP-SAKTI Sahayak — RAG Knowledge Base

Purpose

Focused knowledge base for the project's traditional-knowledge protection feature.

What is TKDL?

The Traditional Knowledge Digital Library is an Indian digital repository based on existing public-domain traditional knowledge literature, including Ayurveda, Unani and Siddha.

Why it matters

Documentation can help patent examiners identify earlier traditional knowledge and reduce the risk of inappropriate patent grants based on known traditional knowledge.

Classification

The knowledge has been organized using a classification approach connected with patent classification concepts, supporting retrieval by patent examiners.

Languages

Government information describes TKDL information as being available in five international languages: English, French, German, Spanish and Japanese.

RAG use

Useful questions: Why was TKDL created? How does documentation help defensive protection? Which traditional medicine systems are covered? In which languages is TKDL information described?

Caution

The assistant should not claim that a particular patent application is blocked or invalid unless the relevant official record supports that conclusion.

Project note: This PDF is an original RAG-oriented summary created for the prototype. For legal, regulatory or medical decisions, use the current official source documents and qualified professionals.
