

08. Demonstration Queries for the Ayurveda RAG Assistant

IP-SAKTI Sahayak — RAG Knowledge Base

Purpose

A ready-to-use evaluation set for demonstrating that the RAG system retrieves relevant Ayurveda, IP and regulatory chunks and cites sources.

Basic Ayurveda

What is Ayurveda? What are the three doshas? What is prakriti? What is agni?

IP and patents

Can traditional Ayurvedic knowledge be patented? What is the role of TKDL? Which IP right is normally relevant to a brand name? What makes a new invention different from known traditional knowledge?

Regulation

What areas of the Indian regulatory framework cover Ayurvedic drugs? What is e-AUSHADHI? What information should an AI provide when asked about Ayurvedic product compliance?

International comparison

How do WHO Ayurveda practice benchmarks differ from an Indian regulatory requirement? Why must the target country be identified before answering an international regulatory question?

Multilingual feature

Explain TKDL in English and another supported language. Translate the answer while preserving technical terms and source citations.

Comparison feature

Compare Indian regulatory information with WHO guidance for Ayurveda practice. Identify which statements are India-specific and which are international reference guidance.

Expected RAG behavior

The system should retrieve relevant chunks, answer from the retrieved evidence, show source names, and clearly state when the available documents do not contain enough information.

Project note: This PDF is an original RAG-oriented summary created for the prototype. For legal, regulatory or medical decisions, use the current official source documents and qualified professionals.
